EXPERIENCE

SAMARTHMEDITECH PVT LTD
2022-PRESENT : Software developer

PROJECTS:

Currently working on Granite Store management project which keeps track of client and customer that uses technology like ejs template engine, bootstrap for frontend and Node.js with Express.js for backend with MariaDB for database .

Clinic and Hospital Management system

This software helps in automation of Health care by providing features, which helps in smooth running of clinics and hospitals .This software provides features Like ,facility to go paperless with digital documentation ,effective management of staff records and attendance management and case history management and doctor to doctor communication and also pharmacy integration .This software is built using latest technologies like React.js and Node.js Express.js and mariadb as a database

Warehouse Managment System

This software makes warehouse management an easier task. This application has both admin dashboard and mobile application. Dashboard is a web application which keeps track of accounts and employees and importantly it keeps track of all purchases and sales and its main feature is to keep track of all orders with all details at every step of the order journey. The web application is built with modern frameworks/libraries like React.js and Bootstrap and Backend is built with Node.js with Express.js as a framework and mariadb as a database .Mobile application is PWA built with Next.js.
